Metamodels and displacements inversion
R installation notes

Rodolphe Le Riche and Nicolas Durrande

October 5, 2017

1   TODOs

- Translate data files (`*.dat`) into R data files to avoid the `R.matlab` package.

2   Prerequisites

1. Have R available on your computer, cf. `https://www.r-project.org/`

2. Optionally (but really helpful) have rstudio installed, cf. `https://www.rstudio.com`

3. For loading the data, which are in matlab format, install the "R.matlab" package (either from Tools / Install Package in rstudio or with the command `install.packages("ggplot2")`.

3   Chronological steps
